MMIC Enters Strategic Relationship with Amerivet Sales and Logistics

Mobile Medical International Corporation (MMIC) and Amerivet Sales and Logistics (Amerivet) enter strategic relationship

ST. JOHNSBURY, VT— October 8, 2009 — Mobile Medical International Corporation (MMIC) announced today a strategic partnership with Amerivet Sales and Logistics L3C (Amerivet) to help in the sale of MMIC's products and services. MMIC, a HUBZone certified company, manufactures Mobile Surgery Units and fully-integrated, rapidly-deployable medical and specialized shelter systems for commercial, military and emergency response applications to a global client base. Amerivet is a small, veteran, service-disabled veteran and woman owned business providing experience and infrastructure for companies selling products and services to government agencies. As one of the few companies in the United States to obtain L3C status, a portion of all Amerivet proceeds go to support programs for deployed/disabled veterans and their families.

"We believe this relationship will significantly help to facilitate our customers' access to our product line through the Amerivet channel. Amerivet's mission is unique in that their profits support veteran's organizations and at the same time they focus on Vermont based suppliers. Their primary markets include the Department of Veterans Affairs, Defense and Homeland Security, each of which is perfectly aligned with MMIC's growth strategy. MMIC continues to demonstrate how our products deliver real world solutions cost-effectively," stated Rick Cochran, President and CEO of MMIC.

"MMIC's products and services are a perfect fit with our prior healthcare and military experience" states Holly Richardson, Founder and President of Amerivet. As a former Director of Public Relations and Chief of Ambulatory Care at a major VA Medical Center, she understands the importance of continuity of care for the unique medical needs of our veterans. She also served in the Navy and was assigned to Germany in support of Operation Desert Storm where she coordinated medical care for injured Marine, Navy and Embassy personnel. "Our veterans have complex needs whether on the front lines or at home and deserve the very best when it comes to healthcare. From supporting a hospital renovation at one of our VA medical centers to providing critical, time-sensitive care to service men and women on the battlefield, Mobile Medical's leading-edge products save lives!", said Richardson.
